

COWANSIM MSFS H125

USER MANUAL

Mapping Your Hardware

READ THIS: When flying a helicopter, you use the collective to provide power input and to go up/down, **NOT** the throttle. Make sure you map collective and throttle to a **DIFFERENT** axis. You do not need to adjust the throttle manually; the governor does that for you automatically. (unless the governor fails) Simply roll the throttle to maximum, then use the collective to fly. If you do not have a dedicated axis for the throttle, then **DO NOT** use it, use the mouse instead. The throttle and collective **MUST** have their own axis.

Always set a unique profile for each aircraft to prevent double bindings and headaches. You can set up custom profiles by clicking “OPEN PRESET MANAGER” at the bottom of the CONTROLS OPTIONS page.

Collective:

Search for “coll” to find **COLLECTIVE AXIS** and map it to any axis.

You may have to reverse it.

Throttle (Twist Grip):

Search for “heli” to find **SET HELICOPTER THROTTLE AXIS** and map to any axis.

You may have to reverse it.

IF YOU DO NOT HAVE A DEDICATED HELICOPTER THROTTLE, THEN DO NOT USE THIS. (SEE ABOVE)

Cyclic Stick:

You can use the default aileron and elevator axis for the cyclic, but it is recommended to use the provided **SET CYCLIC LONGITUDINAL & LATERAL AXIS**.

Search for “cyc” to find **SET CYCLIC LONGITUDINAL & LATERAL AXIS** and map them to your stick axis.

You may have to reverse them.

Anti-Torque Pedals:

You can use the default rudder axis for the anti-torque pedals, but it is recommended to use the provided **TAIL ROTOR AXIS**.

Search for “tail” to find **TAIL ROTOR AXIS** and map it to your pedals or joystick twist axis.

You may have to reverse it.

Trim:

The trim hat switch is located on the cyclic so you can trim the helicopter during flight. Map the trim and use it like any other helicopter. It's not animated when using the binding.

Search for “**rotor l**” to find **INCREASE/DECREASE ROTOR LONGITUDINAL/LATERAL TRIM** and map them to any 4 buttons or toggles, typically the hat switch on your stick, as illustrated below.

^ FLIGHT CONTROL SURFACES		
^ CONTROL TRIMMING SURFACES		
SET ROTOR LONGITUDINAL TRIM		
SET ROTOR LATERAL TRIM		
INCREASE ROTOR LONGITUDINAL TRIM	POV ↗	
INCREASE ROTOR LATERAL TRIM	POV ↘	
DECREASE ROTOR LONGITUDINAL TRIM	POV ↖	
DECREASE ROTOR LATERAL TRIM	POV ↙	

Trim Reset:

The trim reset button is located on the cyclic and resets all trims to zero. It's not animated when using the binding.

Search for “**trim re**” to find **ROTOR TRIM RESET** and map it to any button/switch.

^ FLIGHT CONTROL SURFACES		
^ CONTROL TRIMMING SURFACES		
ROTOR TRIM RESET	7	

Rotor Brake:

The rotor brake is located on the upper middle panel to your left.

Search for “**brake**” to find **TOGGLE ROTOR BRAKE** and map it to any button/switch.

MAIN ELECTRICAL PANEL (NEXT 6)

Battery:

The battery switch is located on the center switch panel.

Search for “**bat**” to find **TOGGLE MASTER BATTERY** and map it to any button/switch.

Generator:

The generator switch is located on the center switch panel.

Search for “**alter**” to find **TOGGLE MASTER ALTERNATOR** and map it to any button/switch.

Anti-collision Lights:

The anti-collision lights switch is located on the center switch panel.

Search for “**recog**” to find **TOGGLE RECOGNITION LIGHTS** and map it to any button/switch.

Horn Mute / Master Warning:

The horn mute switch is located on the center switch panel.

Search for “**mast**” to find **TOGGLE MASTER WARNING** and map it to any button/switch.

Avionics:

The avionics switch is located on the center switch panel.

Search for “**avion**” to find **TOGGLE AVIONICS MASTER** and map it to any button/switch.

Pitot Heat:

The pitot heat button is located on the center switch panel.

Search for “**pito**” to find **TOGGLE PITOT HEAT** and map it to any button/switch.

Hydraulics:

The hydraulics switch is located on the collective head.

Search for “~~hyd~~” to find ~~TOGGLE HYDRAULIC SWITCH~~ and map it to any button/switch.

For some reason the 3D switch works with the event ID coded, but the event ID does NOT when mapped to hardware. This must be a bug since it's the same exact event. So, skip this one for now.

Starter:

The starter switch is located on the upper panel.

Search for “**turbi**” to find **TOGGLE TURBINE IGNITION SWITCH** and map it to any button/switch.

ELT:

The ELT switch is located on the main panel to the left/right depending on the panel option.

Search for “**elt**” to find **TOGGLE ELT** and map it to any button/switch.

Fuel Valve:

The fuel cutoff valve is located on the upper panel.

Search for “fuel v” to find **TOGGLE ENGINE 2 FUEL VALVE** and map it to any button/switch.

Landing Light:

The landing light switch is located on the collective head.

Search for “landing l” to find **TOGGLE LANDING LIGHTS** and map it to any button/switch.

Taxi Light:

The taxi light switch is located on the collective head.

Search for “**taxi**” to find **TOGGLE TAXI LIGHTS** and map it to any button/switch.

Search/Spotlight:

The search light is connected to the wing lights binding. The switch is located on the search light controller box down on the center console.

Search for “**wing**” to find **TOGGLE WING LIGHTS** and map it to any button/switch.

Search/Spotlight Movement:

The search light can be aimed with the 4-way 3D switch, or by using the bindings, typically mapped to a hat switch, as illustrated below. The **HOME** binding returns the light to the default position. Search for “**landing l**” to find **LANDING LIGHTS UP/DOWN/LEFT/RIGHT** and map them to any buttons/ switches.

^ LIGHTS		
^ EXTERIOR LIGHTS		
TOGGLE LANDING LIGHTS		
SET LANDING LIGHTS		
LANDING LIGHTS UP	POV ↗	
LANDING LIGHTS RIGHT	POV →	
LANDING LIGHTS ON		
LANDING LIGHTS OFF		
LANDING LIGHTS LEFT	POV ↖	
LANDING LIGHTS HOME	3	
LANDING LIGHTS DOWN	POV ↘	

Other Bindings:

All other bindings are default and can be mapped at your discretion. Just remember to always use a unique profile for each aircraft to prevent double bindings and other issues. You can set up custom profiles by clicking “**OPEN PRESET MANAGER**” at the bottom of the **CONTROLS OPTIONS** page.

Some custom coded items cannot be mapped to an axis or switch since we currently have no way to make custom bindings, only overriding the current bindings available to us all. Please refer to MSFS documentation for all other bindings.

Flight Model

In general settings make sure that you have MODERN flight model selected. There was an issue in the past where this needed to be cycled through LEGACY and MODERN to correct some bugs. If you have issues, then try that first.

Assistance options

In assistance options, under the PILOTING drop down, make sure that you have HELICOPTERS: ASSISTED TAIL ROTOR and ASSISTED CYCLIC turned OFF for realistic flight dynamics. If you are a beginner or would like an easy game like flying experience then you can switch them on, and the helicopter will become extremely easy to fly. Helicopters are not easy to fly unless you are experienced.

Moving Around

To move around, like opening the doors and “walking” around outside, then map your keyboard just like you would with any first-person game like in the example illustrated below.

Click Spots

There are click spots tied to objects throughout the cockpit. Click spots can only be used in cockpit view, which is why the moving around explanation up above is important if you would like to open and close the doors while outside. It is not possible from the external view. Some click spots are hidden and some will glow when hovered over.

Accessing Options

Weight and Balance:

To access options like passengers and other objects, make sure that the weight and balance options window is ticked on in the upper menu settings window, as illustrated below.

DUE TO THE PERSISTENCE CODE THAT REMEMBERS YOUR SETTINGS, YOU WILL HAVE TO CHANGE OPTIONS WHILE THE HELICOPTER IS LOADED. IT REMEMBERS YOUR LAST FLIGHT, SO SETTING THE WIEGHT AND BALANCE BEFORE THE FLIGHT, FROM THE MAIN MENU, WILL BE OVERWRITTEN WHEN LOADING AND IT WILL LOAD WITH THE LAST FLIGHTS OPTIONS AND WEIGHTS INSTEAD.

Once activated, you can add/remove weight to show/hide all options available.

Panel Options

To switch between panel options simply flip the 2-way panel option switch.

Freeware & Payware GTN650 & 750:

This model comes with PMS and TDS GTN software integration. If you have either one installed, then you will be able to use the **GTN OPTION** switch to cycle through your preferred choice.

You can find the TDS software here: <https://tdssim.com/index>

You can find the PMS software here: <https://pms50.com/msfs/>

TDS is payware and PMS has both freeware and payware options.

Please refer to their product support for installation. We have everything covered on our side. Once installed correctly then either product will work automatically.

**THIS PAGE INTENTIONALLY LEFT
BLANK**

FOR NO REASON, JUST BECAUSE.

ENJOY THE SOFTWARE!
